

Former Oracle Cloud Infrastructure engineer who left to build. Since 2023, I've taken consumer AI products from idea to **shipped, monetized, and distributed** — solo: architecture, App Store, and the growth channels that feed them, including a TikTok channel grown **0→10k in three months**. As comfortable in a codebase as in a conversation.

SELECTED PROJECTS

Tatt That / AI Tattoo Try-On · Live on App Store

FOUNDER-BUILT · iOS + FASTAPI BACKEND · 2026 → PRESENT

AI app rendering photorealistic healed-ink tattoo previews on real body photos. The iOS app fronts a real production system — FastAPI on a self-hosted Hetzner VPS serving a 250+ design catalog, CDN image delivery, server-side AI generation (Gemini / FAL), a credit ledger with reserve/charge/release logic so users are never double-charged, purchase verification, async job polling, product analytics. **14 releases in 5 months, localized in 9 languages.**

🔼4.9★ App Store · live credit monetization

Growth Channel / Tatt That TikTok

FOUNDER-BUILT · DISTRIBUTION · APR - JUL 2026

Built and run Tatt That's primary acquisition channel — photo-carousel posts that double as product demos (one body part, rotating designs; themed collections), driven by trend and cadence analysis. Traffic routes through a landing-page funnel on my site, bridging TikTok to the App Store with conversion tracking. Grew the account from zero to 10,000 followers between April and July 2026.

Sip & Scroll / Habit App · Live

FOUNDER-BUILT · iOS · 2025 → PRESENT

Intercepts distracting apps via Apple's Screen Time APIs and replaces impulsive opens with a hydration ritual. Built across the full Apple extension stack: DeviceActivity and ManagedSettings interception, water-selfie capture, on-device YOLO detection with Gemini Vision fallback at low confidence, subscriptions, widgets, push.

HearLabs / Smart TV Audio Client · CES Demo

iOS FREELANCE · CES-FEATURED STARTUP · 2025

Built the iOS app for HearLabs — an audio startup founded by an Emmy-winning sound designer that corrects TV audio in real time, making dialogue crisp without subtitles or volume surfing. Owned the app end-to-end: Bluetooth Low Energy device pairing, Firebase auth and user management, TestFlight distribution. The founder demoed the technology live at CES on this app.

★ Demoed live at CES · production-shipped on deadline

FaithFilter / AI Media Discovery Client · Live

FULL-STACK FREELANCE · 2025

Semantic search platform for a niche knowledge domain, built from ingestion to interface — OpenAI embeddings into Pinecone, automated podcast/resource ingestion pipeline, embedding-model comparison tooling to diagnose search quality, Supabase backend, React admin dashboard for curators. Deployed to DigitalOcean.

DigitalOcean

"Top-notch builder... regularly suggests improvements that elevate the product." — FaithFilter client

Also shipped: ClipPilot (personal · Mac, App Store) · FutureCitizen.us (AI-video USCIS civics interview simulator with voice-answer analysis + 40-article SEO content engine) · WeaVlog, Digital Events Inc., JJ Property Management (freelance web) — moonrisebay.tech/apps

WORK EXPERIENCE

Software Engineer II — Oracle Cloud Infrastructure (OCI) · San Francisco, CA

JUN 2020 - AUG 2023

- Contributed foundational infrastructure to OCI Search with OpenSearch before GA — provisioned network architecture, IAM policies, and security rules via Terraform; the service launched globally across **30 OCI regions** in May 2022.
- Built the test harness and node-replacement failover logic for OCI Cache (Redis), ensuring cluster uptime under fault conditions — a core reliability feature of the now-shipping managed service.
- Implemented backend infrastructure for Oracle Health's FHIR service (OHA) — IAM groups, policies, and network configuration via Terraform — enabling the team to hit an internal compliance audit deadline. The platform now supports Oracle Health's network of **1,000+ hospital systems** globally.
- Worked across Java and React to implement early API features across multiple managed data services during pre-GA development phases.

ADAS Algorithm Intern — Continental AG · Auburn Hills, MI

MAY - AUG 2018

- Built Python/Bokeh visualization tools to analyze ADAS sensor output, speeding up algorithm comparison cycles for R&D; contributed RL research to an adaptive-cruise-control tuning proposal presented to the head of ADAS R&D.

Graduate Research & Teaching Assistant, CS — Oakland University · Rochester, MI

SEP 2017 - DEC 2019

- Research focus: program synthesis and smarter language design. Supported algorithms and systems coursework as a TA.

TECHNICAL SKILLS

RANGE	iOS · backend/infra · AI pipelines (vision + voice) · growth content · SEO engines · outreach automation
LANGUAGES	Swift / SwiftUI, JavaScript / TypeScript, Python, Java, Terraform, SQL, Bash
AI / ML	OpenAI API, Gemini Vision, FAL.ai, Pinecone, CoreML, YOLO, RAG pipelines, async AI job orchestration
MOBILE	iOS (SwiftUI, UIKit), CoreBluetooth, DeviceActivity / ManagedSettings, StoreKit 2, WidgetKit, TestFlight, App Store Connect
BACKEND	FastAPI, Node.js, Next.js, React, SQLite, PostgreSQL, Supabase, Firebase, nginx, Hetzner VPS, DigitalOcean, AWS, Docker, Kubernetes

EDUCATION

M.S., Computer Science — Graduate Assistantship · Thesis	DEC 2019
Oakland University, Rochester, MI	
B.S., Computer Science — Dean's List · Departmental Honors	MAY 2017
Oakland University, Rochester, MI
